

# GRYBB TEAM 4 RETROSPECTIVE FEEDBACK REVIEW 3

In the third sprint review we had a working application which satisfied the minimum requirements of the web application. We could see the trees on a map which could be filtered based on their water levels. We could also edit the water levels of the trees which would also be reflected on the map. The product we had developed by then was fairly well received by everyone and we were told to perhaps implement some more features on the website.
