

# GRYBB TEAM 4 RETROSPECTIVE

## FEEDBACK REVIEW 4

In the fourth sprint review, our product was extremely well received by everyone since we were able to implement some advanced features like routing, filtering by all characteristics, viewing the database of the trees and editing it as well. Our focus after that was to store the passwords of users by hashing it making it more secure. However, the product owner advised us to not devote our resources to that since it is not a must-have feature and instead focus on polishing the web application more and make it look more appealing.
